

- mononuclear cell differentiation
- leukocyte chemotaxis
- homeostasis of number of cells
- regulation of leukocyte apoptotic process
- CD8-positive, alpha-beta T cell differentiation
- positive regulation of immune response
- Hippo signaling pathway
- cellular response to hypoxia
- mitochondrial membrane organization
- regulation of inflammatory response
- acetylcholine receptor signaling pathway
- SLC-mediated transmembrane transport
- regulation of protein stability
- cellular metal ion homeostasis
- regulation of multicellular organism growth
- Post-translational modification: synthesis of GPI-anch
- mast cell activation
- T cell differentiation in thymus
- regulation of acute inflammatory response
- ADP metabolic process
