

- regulation of cell adhesion
- regulation of cytokine production
- alpha-beta T cell activation
- regulation of chemotaxis
- negative regulation of leukocyte activation
- negative regulation of cell differentiation
- B cell activation
- cell junction organization
- Axon guidance
- T cell lineage commitment
- Cytokine-cytokine receptor interaction
- T cell costimulation
- negative regulation of myeloid dendritic cell activation
- positive regulation of immune effector process
- small GTPase mediated signal transduction
- myeloid cell differentiation
- Signaling by Receptor Tyrosine Kinases
- cell-matrix adhesion
- dendritic spine maintenance
- Costimulation by the CD28 family
