

- regulation of cell adhesion
- regulation of Ras protein signal transduction
- Signaling by Receptor Tyrosine Kinases
- Costimulation by the CD28 family
- Hepatocyte growth factor receptor signaling
- regulation of GTPase activity
- cellular response to growth factor stimulus
- leukocyte migration
- cell activation
- endothelial cell chemotaxis
- Adaptive Immune System
- positive regulation of cardiac muscle hypertrophy
- negative regulation of leukocyte activation
- negative regulation of intracellular signal transduction
- neuron migration
- regulation of cytokine production
- developmental growth
- regulation of transmembrane transport
- regulation of lymphocyte proliferation
- cell junction organization
