

- microtubule bundle formation
- response to nutrient levels
- arginine metabolic process
- Amoebiasis
- Cell death signalling via NRAGE, NRIF and NADE
- dendritic spine development
- endocytosis
- positive regulation of programmed cell death
- establishment or maintenance of epithelial cell apical
- Anchoring of the basal body to the plasma membrane
- Staphylococcus aureus infection
- negative regulation of cell population proliferation
- exocytosis
- Axon guidance
- positive regulation of lipid metabolic process
