

- regulation of cytokine production
- regulation of chemotaxis
- regulation of interleukin-2 production
- regulation of axon extension involved in axon guidance
- regulation of endocytosis
- negative regulation of cell differentiation
- hemopoiesis
- Inflammatory bowel disease
- negative regulation of interferon-gamma production
- adaptive immune response
- acute inflammatory response
- regulation of B cell proliferation
- cell junction disassembly
- iron coordination entity transport
- focal adhesion assembly
- telencephalon development
- mature B cell differentiation
- regulation of developmental growth
- Post-translational modification: synthesis of GPI-anchored proteins
- regulation of transforming growth factor beta production
