

- regulation of cell adhesion
- regulation of cell activation
- regulation of cytokine production
- positive regulation of response to external stimulus
- B cell activation
- Cell adhesion molecules (CAMs)
- cell-matrix adhesion
- regulation of transforming growth factor beta production
- neurotransmitter uptake
- Proteoglycans in cancer
- negative regulation of cell differentiation
- Costimulation by the CD28 family
- Inflammatory bowel disease (IBD)
- vasculature development
- negative regulation of extrinsic apoptotic signaling pathway
- signal release
- regulation of chemotaxis
- axon development
- cellular response to growth factor stimulus
- CD4-positive, alpha-beta T cell lineage commitment
