

- actomyosin structure organization
- Id signaling pathway
- regulation of epithelial cell proliferation
- insulin metabolic process
- regulation of homotypic cell-cell adhesion
- Ca²⁺ pathway
- Natural killer cell mediated cytotoxicity
- regulation of blood pressure
- organic acid catabolic process
- cell junction organization
- axoneme assembly
- response to glucose
- postsynaptic modulation of chemical synaptic transmi
- regulation of dendrite morphogenesis
- regulation of muscle system process
- smooth muscle cell migration
- actin filament depolymerization
- gland development
- Amoebiasis
- negative regulation of fatty acid metabolic process
