

- microtubule-based movement
- Vesicle-mediated transport
- peptidyl-arginine modification
- positive regulation of calcium ion transport
- regulation of epidermal growth factor-activated recep
- neuron maturation
- Transferrin endocytosis and recycling
- attachment of spindle microtubules to kinetochore
- microtubule cytoskeleton organization
- ventricular system development
- regulation of B cell differentiation
- synaptic vesicle recycling
- focal adhesion assembly
- negative regulation of actin filament depolymerization
