

- transforming growth factor beta receptor signaling pa
- negative regulation of cell differentiation
- Ca²⁺ pathway
- circulatory system process
- regulation of cellular carbohydrate catabolic process
- regulation of dendrite morphogenesis
- T-helper 1 cell differentiation
- Focal adhesion
- protein phosphorylation
- regulation of angiogenesis
- tube morphogenesis
- Natural killer cell mediated cytotoxicity
- neuromuscular junction development
- Chemokine signaling pathway
- postsynaptic modulation of chemical synaptic transmi
- cellular glucose homeostasis
- negative regulation of DNA binding
- multicellular organismal response to stress
- cilium or flagellum-dependent cell motility
- Spinal cord injury
