

- negative regulation of leukocyte activation
- second-messenger-mediated signaling
- Renin secretion
- regulation of cell activation
- positive regulation of response to external stimulus
- negative regulation of cell population proliferation
- negative regulation of production of molecular media
- apoptotic signaling pathway
- neurotransmitter uptake
- cellular response to copper ion
- response to wounding
- vasculature development
- detection of bacterium
- negative regulation of vascular permeability
- artery morphogenesis
- plasma membrane phospholipid scrambling
- Oxidative stress and redox pathway
- fibroblast migration
- calcium ion transmembrane import into cytosol
- positive regulation of focal adhesion assembly
