

- regulation of cell activation
- inflammatory response
- positive regulation of response to external stimulus
- leukocyte differentiation
- Cytokine-cytokine receptor interaction
- regulation of response to biotic stimulus
- T cell migration
- second-messenger-mediated signaling
- regulation of system process
- negative regulation of phosphorus metabolic process
- vasculature development
- regulation of interleukin-17 production
- metal ion homeostasis
- Natural killer cell mediated cytotoxicity
- heterotypic cell-cell adhesion
- regulation of B cell proliferation
- Tyrobp causal network in microglia
- regulation of peptidyl-tyrosine phosphorylation
- natural killer cell activation
- signal release
