

- regulation of cell adhesion
- negative regulation of cell differentiation
- regulation of cytokine production
- regulation of chemotaxis
- CD4-positive, alpha-beta T cell activation
- axon development
- cell junction organization
- Cytokine-cytokine receptor interaction
- regulation of interleukin-17 production
- membrane protein ectodomain proteolysis
- forebrain development
- substrate-dependent cell migration
- stem cell development
- morphogenesis of an epithelium
- spindle localization
- regulation of B cell differentiation
- Proteoglycans in cancer
- Inflammatory bowel disease (IBD)
- glucose homeostasis
- cell fate commitment
